

Benetracker - Incoming payment tracker for beneficiaries

published on 13.01.2020

BNP Paribas is co-creating with its corporate clients to leverage the latest treasury technologies to deliver concrete solutions that solve today's treasury headaches, while preparing treasurers for the future operating environment.

The 'Treasury Board' is an event organised by BNP Paribas Cash Management, bringing together global treasurers from large MNCs, from across the world, for a day of intense ideation and co-creation workshops.

One of the finest co-creations to come out the Treasury Board is Benetracker. It is a DHL-style tracker, aimed at tracking payments with a focus on beneficiaries to make them aware of the status of specific payments that are due to them. It is directly accessible by beneficiaries in order to minimise the time spent chasing outgoing payments and allows them to access a public space where they can see non-confidential data about the payment. BNP Paribas is leading the charge in delivering gpi Tracker functionality direct to clients and has enabled gpi functionality on MT as well as XML messages.

In this video, Wim Grosemans, head of product development, Payments & Receivables, and Steven Lenaerts, head of product management, Global Channels, explain how this track-and-trace solution for beneficiaries works.

Treasury Essentials: SWIFT's KYC Registry in 60 seconds

Trends & Vision 28/11/2019

As every treasurer knows all too well, banks face a proliferation of on-boarding and periodic review challenges when carrying out Know Your Customer (KYC) processes. SWIFT founded its KYC Registry in 2014 to help address these requirements which were becoming ever more complex.

Treasury Essentials: APIs in 60 Seconds

Trends & Vision 23/09/2019

Application programming interfaces, or APIs, are constantly mentioned in financial circles today, but just what are they? They are certainly no passing fad and they offer treasurers new ways of working, moving on from batch processing into a real-time environment, facilitating more efficient payments and delivering working capital management benefits ? as well as the ability to seamlessly interface with different systems.

Treasury Essentials: RPA in 60 seconds

Trends & Vision 29/10/2019

Robotic process automation (RPA) is based on the concept of software robots becoming virtual workers. The use of RPA helps organisations to understand and carry out repeatable work and ?trains? process-based applications to interact with structured and unstructured data.
